TREATING OUD BEYOND MAT

EPISODE #9 WITH DR. STEVE LEE

THE NECESSITY OF NON-PHARMACOLOGICAL MODALITIES IN THE TREATMENT OF OPIOID USE DISORDER

Although much focus is given to the medication aspect of treating opioid use disorder (OUD), psychosocial treatment is an integral part of the treatment arsenal to help achieve patient success. Available evidence shows reduced opioid use, longer retention times in treatment, and longer rates of abstinence¹². Psychosocial treatment can include motivational interviewing, cognitive behavioral therapy, acceptance and commitment therapy, and others.

Examples of clinical guidelines and education on the efficacy and types of psychosocial treatment modalities can be found below:
